ICCD 2010

Sponsorship (pending) by
IEEE Computer Society, IEEE Circuits and Systems Society and IEEE Electron Devices Society

Call for Papers   **Important Dates** Submission: **May 7 (abstract)**   Notification: **July 23**   Camera-Ready: **August 23**

http://www.iccd-conference.com

The International Conference on Computer Design encompasses a wide range of topics in the research, design, and implementation of computer systems and their components. ICCD's multi-disciplinary emphasis provides an ideal environment for developers and researchers to discuss practical and theoretical work covering system and computer architecture, verification and test, design and technology, and tools and methodologies.

The theme for the 2010 ICCD conference is:

- Embedded Systems -

Submitted papers consistent with this theme are encouraged, but manuscripts describing original work on any topic from the scope of ICCD are welcome. Authors are asked to submit technical papers in accordance to the author's instructions in one of the following five conference tracks:

Computer Systems: Methods, Implementations, and Applications.
Advanced computer architecture for general and application-specific enhancement; System design methods for uni- and parallel processors; Design methods for homogeneous and heterogeneous multi-core processor systems and system-on-chip designs; IP and platform-based designs; HW/SW-Codesign; Modeling and performance analysis; Support for security, languages and operating systems; Smart Cards; Real-time Systems; Application-specific and embedded software optimization; Optimizing and parallelizing compiler support for multithreaded and multi-core designs; Memory system and Network system optimization.

Processor Architecture. Microarchitecture design techniques for uni- and multi-core processors: instruction-level parallelism, pipelining, caching, branch prediction, multithreading, computer arithmetic; Techniques for low-power; secure, and reliable processor designs; Embedded, network, graphic, system-on-chip, application-specific and digital signal processor design; real-life design challenges: case studies, tradeoffs and post-mortems.

Logic and Circuit Design. Circuits and design techniques for digital, memory, analog and mixed-signal systems; Circuits and design techniques for high performance and low power; Circuits and design techniques for robustness under process variability and radiation; Design techniques for emerging process technologies (MEMs, spintronics, nano, quantum); Asynchronous circuits; Signal processing and arithmetic circuits, and circuits for graphic processor design.

Electronic Design Automation. High-level, logic and physical synthesis. Physical planning, design and early estimation for large circuits; Automatic analysis and optimization of timing, power and noise; Tools for multiple-clock domains, asynchronous and mixed timing methodologies; CAD support for FPGAs, ASSPs, structured ASICs, platform-based design and networks-on-chip; DfM and OPC methodologies; Tools, methodologies and design strategies for emerging technologies (MEMs, spintronics, nano, quantum).

Verification and Test. Functional, transaction-level, RTL, and gate-level modeling and verification of hardware designs; Simulation-based and formal techniques for functional design verification; Dynamic simulation, equivalence checking, formal verification, model and property checking, and theorem proving; high-level design validation; hardware emulation, modeling languages; assertion-based verification, coverage-analysis, constrained-random test generation; design error debug and diagnosis; Hardware/Software validation; Fault modeling; Fault simulation and ATPG; Fault tolerance; DFT and BIST; SoC verification.

ICCD 2010 ORGANIZING COMMITTEE

General Chairs
 Peter-Michael Seidel, AMD
 Georgi Gaydadjiev, TU Delft

Technical Program Chairs
 Sofiene Tahar, Concordia University
 Lars Svensson, Chalmers University

Special Sessions Chairs
 Sandip Kundu, University of Massachusetts
 Jarmo Takala, Tampere University of Technology

Finance Chairs
 Stephan Wong, TU Delft and Elaheh Bozorgzadeh, UC Irvine
Publication Chairs
 Suleyman Sair, INTEL and Zaid Al-Ars, TU Delft

Publicity Chairs
 Eren Kursun, IBM and Dionisios Pnevmatikatos, ICS-Forth & TU-Crete

Local Arrangement Chairs
 Carlo Galuzzi, TU Delft and Ioannis Sourdis, TU Delft

ICCD 2010 TRACK CHAIRS

Computer Systems
 Greg Byrd, North Carolina State University
 Alex Ramirez, Universitat Politecnica de Catalunya

Processor Architecture
 Jim Bondi, Texas Instruments
 Ben Juurlink, TU Berlin

Logic and Circuit Design
 Massimo Alioto, University of Siena
 Fabrizio Lombardi, Northeastern University

Electronic Design Automation
 Andy Pimentel, University of Amsterdam
 Azadeh Davoodi, University of Wisconsin-Madison

Verification and Test
 Sule Ozev, Arizona State University
 Klaus Schneider, University of Kaiserslautern
